With our regular maintenance we secure the reliable operation of your systems. Any faults can be identified which could lead to a failure of the system in the long term.

MAINTENANCE

Our maintenance includes:

- Inventory of the facilities
- Inspection of all system parts
- Review of all operating parameters
- Documentation
- Notification of any legal changes, inspection periods and maintenance intervals
- Repair recommendations

We ensure optimum care of your systems so that no predictable damage occurs. We keep you updated and inform you about upcoming maintenance needs. You can be sure that your systems are subject to regular and legally compliant testing.

Control Services will keep your system operating at top efficiency. With our constant monitoring we are able to maintain the fitness of your system and assure an optimised building operation mechanism.

Our individual monitoring services:

- Alarm notification
- Parameter definition
- Individual procedure selection
- Active monitoring
- Building performance

We collect all data from multiple sources to turn them into valuable insights. Real-time overview of system performance enables you to take the right actions and to detect and minimise system failures. We define critical areas and parameters and create your individual monitoring procedures.
